

4. How to do In-plant movements (to remove)

The defective yard manager has the capability to initiate a product **movement** within the same location, transferring it from one area to another. To initiate the process, the user can begin by selecting the "Movements" option within the stock tab.

To create a new movement, the user must select the '+' located at the top right. Then, information pertaining to the current location of the product, the destination container's location, and the product type must be inputted. By providing these details, the defective yard manager can effectively execute the necessary product relocation within the designated location. This movement requires authorisation from the container coordinator of the destination location.

The screenshot shows a mobile application interface for creating a movement. At the top, the status bar displays the time 11:46 and various icons. Below the status bar is a header with a back arrow and the title 'Create a movement'. The main form consists of three input fields: 'From' with the value 'KABATI Revalidation Yard', 'To' with the value 'KABATI Accessories Store', and 'Product type' with a right-pointing chevron. At the bottom of the screen is a large grey button labeled 'CREATE MOVEMENT'.

11:46

← Create a movement

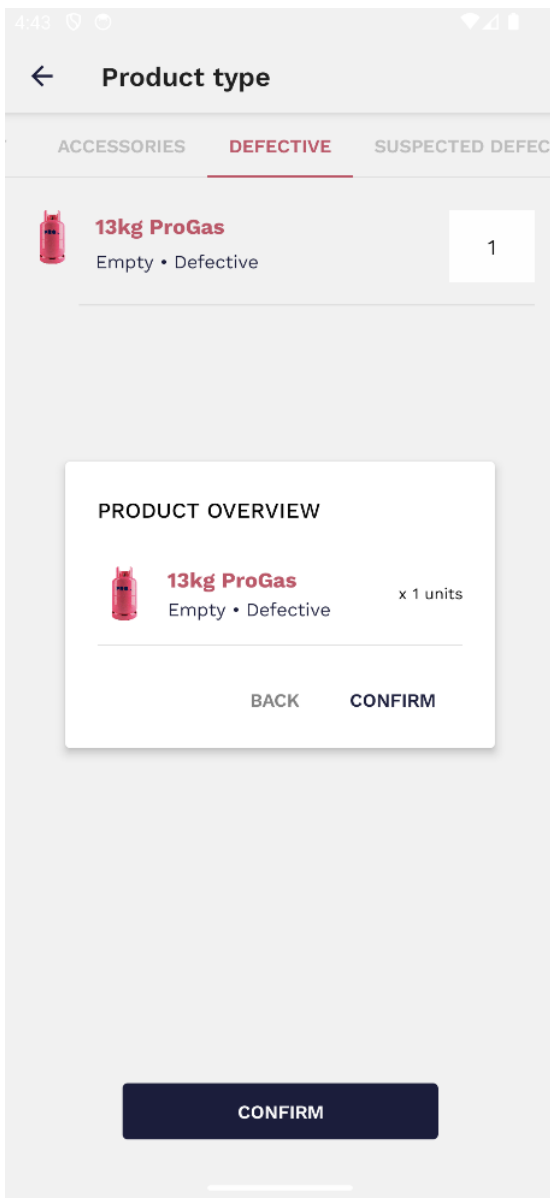

From
KABATI Revalidation Yard

To
KABATI Accessories Store

Product type >

CREATE MOVEMENT

After entering the 'from' and 'to' fields, the user will have the option to specify the type of product.
