# Open Stock

Each warehouse has its own stock of various products. The container manager has to open the stock in order to make the products available to the drivers. On the app, you can access the **Stock** tab and manage the container's stock levels, as well as fill orders, report defectives, and close stock.

To select the available products, you will have access to a product catalog and be able to choose the amount for each one of them. All inputs should be filled even if the amount is 0.

After selecting the products, you will be able to access to the stock summary with the Container name and all the listed products. If everything is correct, confirm and open stock.

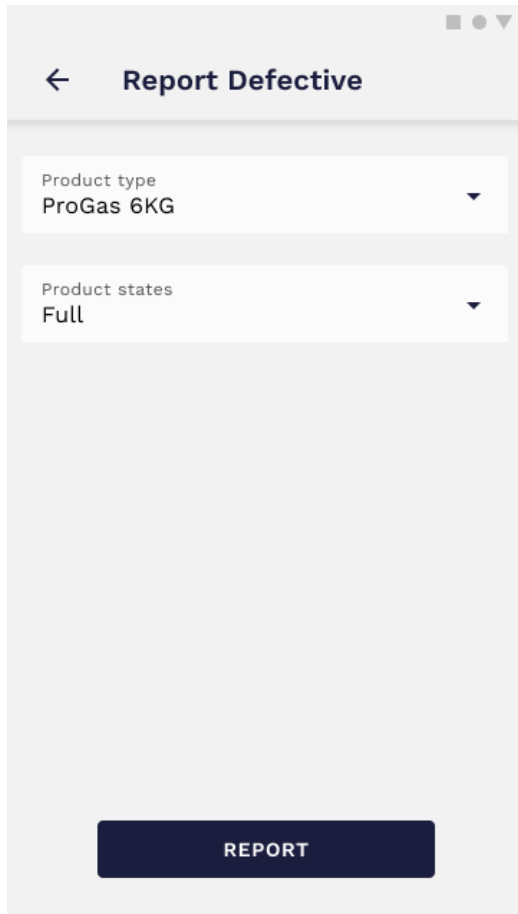

When the stock is opened, you are able to perform other actions, until you close the stock.

# Report defective

When you find a defective canister, it should be reported to the system. In order to do that, you should select the Product Type and the current state (Empty/Full).

A mobile application interface for reporting a defective canister. The screen has a light gray background. At the top, there is a header bar with a back arrow icon on the left and the title "Report Defective" in the center. Below the header, there are two white rectangular input fields. The first field is labeled "Product type" and contains the text "ProGas 6KG" with a downward-pointing chevron icon on the right. The second field is labeled "Product states" and contains the text "Full" with a downward-pointing chevron icon on the right. At the bottom of the screen, there is a dark blue rectangular button with the word "REPORT" in white capital letters.

REPORT

The reported products are marked as **Suspected Defective** until the **Auditor** marks them as **Defective**.

# Filling orders

Filling orders are managed in the Back Office and displayed as cards on the App. To fill an order, you have to select one of the orders, analyze the details and move the required products first. After that, it becomes possible to fill the canisters.
