# Open Stock

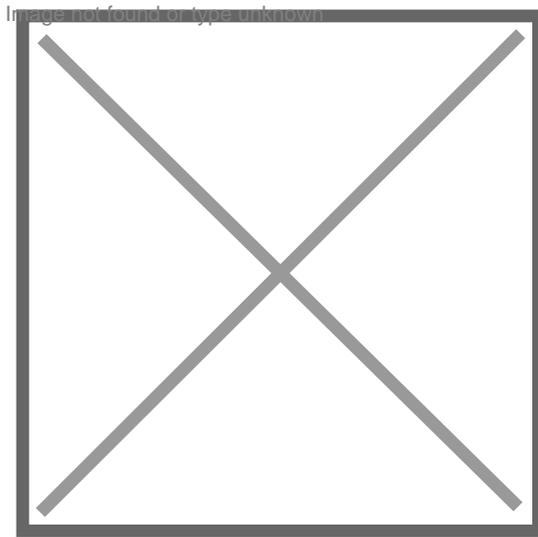

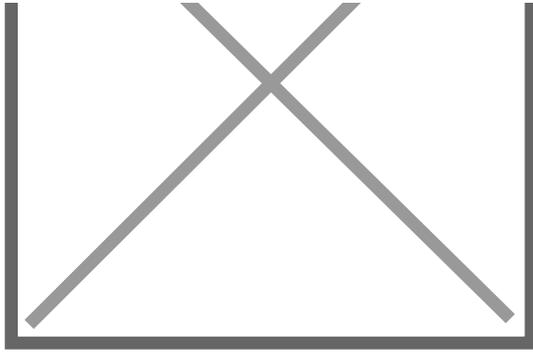

Each warehouse has its own stock of various products. The container manager has to open the stock in order to make the products available to the drivers. On the app, you can access the **Stock** tab and manage the container's stock levels, as well as fill orders, report defectives, and close stock.

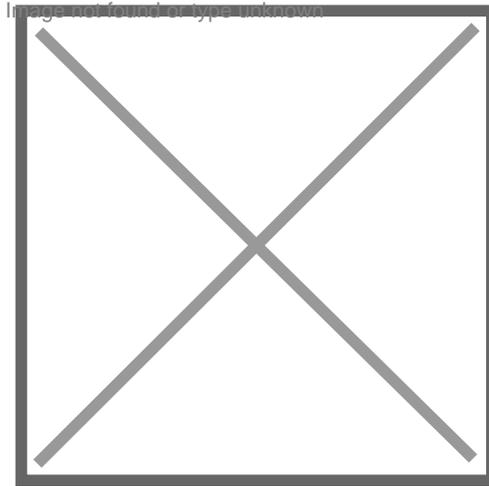

To select the available products, you will have access to a product catalog and be able to choose the amount for each one of them. All inputs should be filled even if the amount is 0.

After selecting the products, you will be able to access to the stock summary with the Container name and all the listed products. If everything is correct, confirm and open stock.

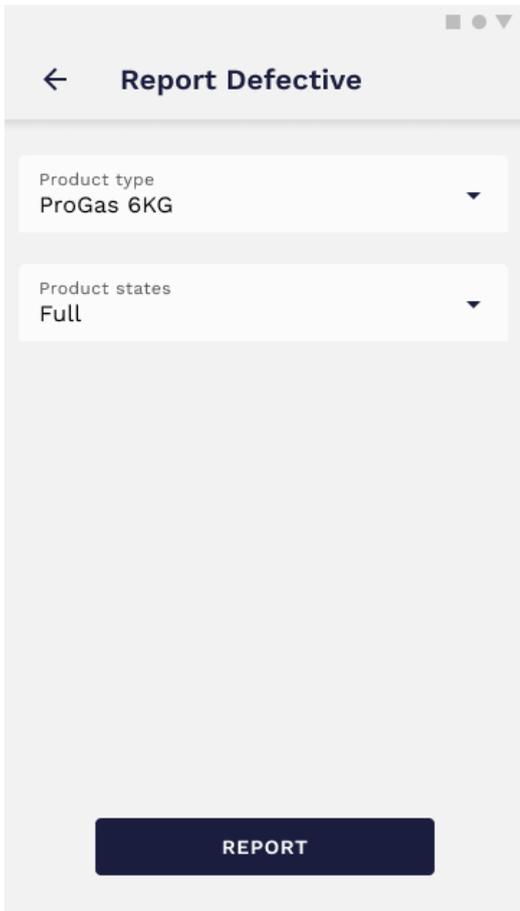

When the stock is opened, you are able to perform other actions, until you close the stock.

# Report defective

When you find a defective canister, it should be reported to the system. In order to do that, you should select the Product Type and the current state (Empty/Full).

The screenshot shows a mobile application interface for reporting a defective canister. The title bar at the top left contains a back arrow and the text "Report Defective". Below the title bar, there are two dropdown menus. The first dropdown is labeled "Product type" and has "ProGas 6KG" selected. The second dropdown is labeled "Product states" and has "Full" selected. At the bottom of the screen, there is a dark blue button with the text "REPORT" in white capital letters.

REPORT

The reported products are marked as **Suspected Defective** until the **Auditor** marks them as **Defective**.

# Filling orders

Filling orders are managed in the Back Office and displayed as cards on the App. To fill an order, you have to select one of the orders, analyze the details and move the required products first. After that, it becomes possible to fill the canisters.

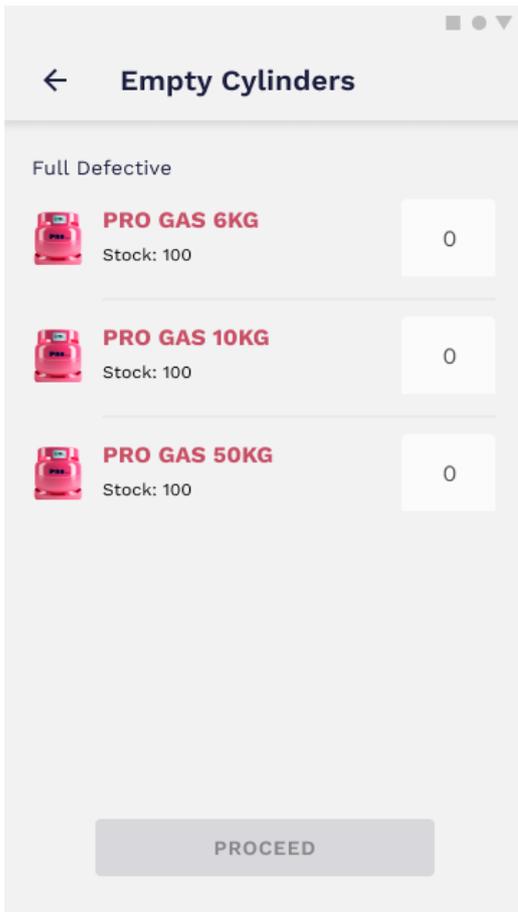

# Extract gas

When a canister is marked as defective, it should be extracted. To do that, you'll have access to a list of products and the current stock. Select the number of canisters you want to empty and submit your selection.

The screenshot shows a mobile application interface with a title bar at the top containing a back arrow and the text "Empty Cylinders". Below the title bar, the text "Full Defective" is displayed. The main content area lists three items, each with a red gas canister icon, a product name, a stock count, and a selection input field:

Product Name	Stock	Selection
PRO GAS 6KG	100	0
PRO GAS 10KG	100	0
PRO GAS 50KG	100	0

At the bottom of the screen, there is a grey button labeled "PROCEED".
