

# User Availability

## User availability

In order to see all users' availability in the system, you can click on the **User availability** tab. There, you can switch between the **online** and the **offline** tab to see the users that are online, which means they are using the system and are clocked in and the ones offline and are clocked out. Besides the basic information about the user, you can also see the user's location through the coordinates at that moment.
